# CELONIS INTELLIGENT BUSINESS CLOUD

Data Engineer Online Training

1. Infrastructure – Understand the basics of the Event Collection

   1. Which systems can be connected to the Intelligent Business Cloud?
      • On-premise source systems [true]
      • Cloud systems [true]
      • On-premise databases [true]

   2. Why is a Connector needed to facilitate the connection between an on-premise source system and the Intelligent Business Cloud?
      • On-premise systems typically can't communicate with external applications. [true]
      • The Intelligent Business Cloud can't communicate directly with other systems. [false]
      • The Connector allows for a more stable and performant way to extract data. [true]

   3. Which of the following statements is/are true?
      • The Connector can synchronize data with the Intelligent Business Cloud in an asynchronous way. [true]
      • A dedicated Connector server is needed to connect the Intelligent Business Cloud to another Cloud system. [false]
      • To connect to an On-premise source system a Connector needs to be set up in the network of the Intelligent Business Cloud. [false]
